

**Remarks**

Applicant submits the foregoing Claim amendments to correct inadvertent mistakes in Claim language of the present Application, prior to issuance as a U.S. Patent.

Specifically, Claim 2 is amended to correct a mistake in nomenclature of Formula IA, wherein the "R" group was inadvertently represented as an "OH" group at the 2-position of the quinolyl ring. As recited in the text accompanying the structural formula in Claim 2, R is OH when Y is =N- and R is H when Y is =N(O)-; thus Claim 2 is amended to correctly represent Formula IA, which is capable of possessing *either* an OH group or a H group in the 2-position of the ring. Support for the amendment to Claim 2 can be found in the Claim as originally filed and additionally at Paragraph 0020 of Applicant's published Application, Pub No 2006/0135558, as well as at Page 4 of Applicant's specification.

Additionally, Claim 4 is amended to include piperidine compounds disclosed in Applicant's Application at Examples 1 and 2, rather than the compounds disclosed at Examples 3 and 4, as previously recited in Claim 4. Support for the amendments can be clearly found, as mentioned, at Examples 1 and 2 of Applicant's disclosure, which corresponds to Paragraphs 0035 through 0036 of Applicant's Pub No 2006/0135558.

Applicant respectfully asserts that no new matter is added by the foregoing amendments and that the amendments are made merely to present Applicant's Claims in proper form for issuance as a U.S. Patent.

Prompt and favorable consideration of this amendment is respectfully requested.

Respectfully submitted,  
**Montgomery, McCracken, Walker & Rhoads, LLP**
